

State-Regulated Industry Services

Specializing in FDA Regulatory Matters

EAS Consulting Group

A Certified Group Company

EAS Consulting Group, LLC is a leading provider of regulatory services to the pharmaceutical, medical device, food, dietary supplement, tobacco and cosmetic industries. Originally founded in 1960, the firm has more than 50 years of experience assisting clients in developing regulatory strategies, implementing quality assurance programs, filing regulatory submissions and ensuring compliance with FDA and State regulations. Employing a unique team of former Food and Drug Administration (FDA) officials, state officials, and industry experts, EAS offers unparalleled expertise with many consultants having more than 30 years of FDA, state, and industry experience.

EAS Consulting Group, LLC is a leading provider of regulatory services to the pharmaceutical, medical device, food, dietary supplement, tobacco, and cosmetic industries. Originally founded in 1960, EAS has over 50 years of experience assisting clients in developing regulatory strategies, implementing quality systems, filing regulatory submissions, and ensuring compliance with all Food and Drug Administration (FDA) regulations. Employing a unique team of former FDA officials and industry experts, many with more than 30 years of experience, EAS has unparalleled expertise to assist clients with all of their consulting needs.

Consulting

EAS provides a full spectrum of consulting services. Our consultants have spent a good portion of their professional career working at or with federal and state agencies. It is this first-hand experience that sets EAS apart from others in this industry.

Whether you need assistance with label claims or state licensing requirements; have questions about the safety of a food, animal feed, dietary supplement, or cosmetic ingredient; need assistance in performing internal audits; need advice on whether to recall a product; or need help in setting up your quality systems, we have experts to help. We have a staff consisting of labeling experts; scientists with medical, nutrition, chemistry, microbiology, toxicology, and entomology backgrounds; and compliance officials with detailed knowledge of regulatory requirements.

Submissions

There are several states that require beverage, bottled water, and animal feed manufacturers to obtain a license to distribute products within their boundaries. The complexities of these license submissions vary by state. We provide license management services including preparation and submission of license applications. By seeking our advice early we can outline the quickest, least expensive route to satisfy applicable regulatory requirements.

Our scientific staff, including food scientists, toxicologists, and medical experts, is internationally known for their expertise in conducting safety reviews and in gaining approvals from regulatory bodies. We are able to guide you through this complex process and can act as a liaison between your organization and the regulatory agency for all compliance issues. We will review your situation and make recommendations on the available options. We will map out a strategy for compiling the necessary data and submit the appropriate documentation to the regulatory agencies. We are available to convene expert panels to conduct an independent safety evaluation of a food, color or dietary ingredient when needed.

Auditing

Companies throughout the world are finding EAS auditing services to be unparalleled. Our auditors are available to travel to your corporate office, manufacturing, warehouse, or retail facilities anywhere in the world. With the high cost of maintaining in-house auditors, EAS is finding increased demand for our auditing services. Our auditors are typically former FDA inspectors with strong regulatory backgrounds. They are specially trained in FDA and State regulations. For example, our food auditors are experts in the principles of Hazard Analysis and Critical Control Point (HACCP), Hazard Analysis and Risk Based Preventive Controls (HARPC) and our animal feed and dietary supplement auditors are experts in the applicable regulatory requirements.

EAS auditors are available to conduct facility audits throughout the food, dietary supplement, and animal feed industries. These services include Good Agricultural Practice (GAP) audits, juice HACCP audits, Low Acid Canned Food (LACF) audits, food, dietary supplement, and Good Manufacturing Practice (GMP) audits.

Training

We pride ourselves on our ability to conduct training courses tailored to the needs of your organization. Our staff will travel to your facility so you can receive customized training at a reasonable cost. We also conduct public training seminars at convenient locations throughout the US and abroad. Students who have attended our programs have found EAS training to be unique in that they have an opportunity to ask former regulators questions that simply cannot be addressed by other training organizations. Whether it is a training program on the regulatory requirements of bottled water or bottle bills, you will find these sessions to be extremely beneficial.

Label Assistance

EAS' labeling staff is highly experienced in regulations pertaining to bottled water, animal feed, beverages, bottle bills, food, and dietary supplement labels. With our detailed knowledge of state labeling and permit requirements, we can review your labels and advise you on how to be in compliance.
